Signing of the Founding Agreement of the Public Interest Group “Institut Jazari ROOT”
13 January 2026

Signing of the Founding Agreement of the GIP “Institut Jazari ROOT”
Casablanca, January 12, 2026 - The General Confederation of Moroccan Enterprises (CGEM) participated in the official launch ceremony of the program "AI Made in Morocco - AI at the heart of digital transformation and public services", organized by the Ministry of Digital Transition and Administration Reform.

On this occasion, Mr. Chakib ALJ, President of the CGEM, signed the founding agreement of the Public Interest Group (GIP) "Institut Jazari ROOT", alongside several ministerial departments and public institutions marking a structuring step in the implementation of the national roadmap "Morocco AI 2030".

Conceived as the federating heart of the national network of Jazari Institutes, Jazari ROOT aims to strengthen the link between research, technological innovation, and the concrete needs of the economy and public services. It will play a central role in the development of skills, applied research, innovation in artificial intelligence, and the structuring of digital and strategic data infrastructures, serving a sovereign, trustworthy AI with a high impact.

Through this signature, the CGEM reaffirms the commitment of the Moroccan private sector to actively contribute to the digital transformation of the Kingdom, to the skill enhancement of talents, to the strengthening of the competitiveness of enterprises, particularly startups and technological SMEs, and to the creation of sustainable value across all territories.

The participation of the CGEM in the GIP Jazari ROOT is part of its desire to promote a public-private partnership approach, an essential condition for the emergence of a high-performing, inclusive AI ecosystem aligned with national priorities for economic, social, and territorial development.
