Ms. Amal El Fallah Seghrouchni, Minister Delegate to the Head of Government, in charge of Digital Transition and Administrative Reform, presided this Tuesday in Rabat over a presentation dedicated to the current state of the roadmap "Morocco for Artificial Intelligence 2030", the progress of its various projects and structuring programs, as well as several achievements and solutions illustrating the gradual transition of the national vision in artificial intelligence to its implementation and deployment phase.

This dynamic is part of the "Morocco Digital 2030" strategy and follows on from the momentum initiated with the national conference on artificial intelligence, organized in Rabat on July 1st and 2nd, 2025 under the High Patronage of His Majesty King Mohammed VI, may God assist him.

By 2030, the roadmap sets objectives including generating 100 billion dirhams of added value to the gross domestic product, creating 50,000 direct and indirect jobs, and training and certifying 200,000 talented individuals and skills. It is also based on three pillars and ten structuring programs covering sovereignty and trust, innovation and competitiveness, and impact, adoption, and influence. These programs include regulations, infrastructure, shared digital platforms, national language models, human capital, financing, territorial innovation, international cooperation, performance measurement, and change management.

The meeting also provided an opportunity to review the progress of projects related to digital sovereignty, particularly infrastructure, data centers, and the sovereign cloud. Discussions also focused on the Data Factory, dedicated to the collection, structuring, and preparation of data for use in artificial intelligence models, as well as the Software Factory, which aims to share reusable software components between government agencies and enhance interoperability.

In terms of human capital, the various programs aimed at expanding the national skills base were presented, with the objective of reaching 100,000 new digital talents trained each year by 2030. These programs also include initiatives aimed at research, students, children and young people, as well as territorial initiatives such as RamadanIA and RallyIA Future Lab.

The meeting was finally marked by the presentation of a sovereign platform of artificial intelligence solutions, bringing together in a unified space concrete solutions serving citizens and the administration.
